

SHERA CEMENT BONDING primer

Product Description

It is acrylic latex ready to use and bonding agent for concrete, with penetrates pores of old concrete, forming a chemical bond for new surface without the need to mechanically roughen the existing surface to obtain a bond. Increase adhesion, flexural strength, impact resistance and scratch resistance.

Applications

Surface must be structurally sound, clean and dry. For bonding primer, apply directly to concrete surface by brush, roller or sphy. Let it dry about 30 – 60 minutes before apply new concrete, plaster, mortar or other top coating.

Clean tools and equipment with water

Features	U. M.	Value
Base	-	acrylic polymer
Density	kg/m ³	1000
Appearance	-	Milky white liquid
Packagging	l	4
pH	-	7 ca.
Coverage	m ² /l	10/15
Mixing ratio		For bonding primer – direct use
